THE NEED OF THE RELIGION AND THE CONCEPT OF THE CREATOR

INTRODUCTION

Human beings are the ones who are sent by the Allah Almighty in this world for the sake of the preparation for the world hereafter. Human beings are classified as “Crown of the Creations”. This is because of the universal attributes which are given to human beings from Allah Almighty. The most important thing which separates human beings from other creations is their attribute of “thinking”. Among all the creations of Allah Almighty, human beings could think and make decisions according to their thinking and analysis. This is the reason why Allah Almighty has given human beings the title of “Crown of creations”. Now, human beings always have the quest of knowing his creator. Therefore, human beings follow a religion which gives a path through which they can recognize their God and worships him accordingly. According to Martin Luther King, religion gives human wisdom which science can’t. Once Martin Luther King said,

> “Science gives man knowledge, which is power, religion gives man wisdom which is control." [i]

We being humans have the intellectual ability to ponder about things of which we don’t have knowledge. It's in our nature that we always think about the reasoning of everything. This is the main thing which compels man to believe in the presence of God who is behind all these beautiful creations. When humans become curious about their own existence and about the creation of the whole universe, they started believing that all this cannot be a coincidence, there should be someone, who is behind all these mysterious and remarkable creations. Humans evaluate everything rationally. Therefore, Allah Almighty made this whole universe with many wonders and in every wonder, there is always some hidden mysteries that are decoded by humans in the future and which results into their believe in the creator of the whole universe. Once Issac Newton once said about the beautiful system of the universe as:

"This most beautiful system could only proceed from the dominion of an intelligent and powerful Being." [ii]

NEED OF RELIGION

The religion is an essential part of everyone's life which tells us about the code of the life that should be followed at every cost. The religion tells us all those things in which our science lacked and still wonders. For instance, it tells us that who is behind the creation of the whole universe and who is maintaining all the system of the universe. It tells us about the purpose of our life on the Earth. The religion is kind of guidance which human beings need in their life in solving different problems in our lives. It tells us about our creator and guides us through those things in which science is still wondering and couldn't find the answers.

It is in the nature of human beings that they always compel to belief in a supernatural being who is invisible for all of us. According to scientists, our brain and neural system is embedded in such a way that we all believe in mysterious things and ponder who is behind all these creations. Therefore, Human beings always tends to believe in a mighty lord who is the owner of all these creations.

ARGUMENTS AND ITS EVIDENCE

Many people in the modern world believe that the whole universe is working on its own without any creator. They believe that all system of the whole universe is working on its own but it's totally wrong as the whole universe is working under the presence of a mighty power who is the omnipotent and omnipresent.

BIG BANG THEORY

Some scientists believe that the universe came into existence because of a big cosmic blast in the universe which forces everything to its specific place. But it's against the "law of Entropy" which says, "the disorder of a system always increases." Scientists also give reason that a binding force restricts all planets to move in their own orbits, but the scientists have no clue about this binding force. This binding force is nothing other than the control of Allah Almighty on the universe.

LONG STRETCHES OF UNIVERSE

The universe is very vast. It is beyond human imaginations. After millions of years and so much revolution in technology, humans could only get information about a small part of the universe which is known as "Observable Universe". Its distance is approximately "93 billion light years". This is considered as a part of the universe in which the light can be reflected. This part of the universe is also being classified as the bright part of the universe rest part of the universe is classified as the dark part of the universe in which light could not be reflected. We should ponder about this fact that,

who is managing such a vast universe which could not be even discovered by the men after so much advancement in technology. Science is still maintaining silence about it. They admit that all things in the universe are working in a desired pattern and even if a slightest difference occur in their timing and pattern then it can result into horrible destruction. Allah Almighty said about the fixed patterns of each planet in Quran as:

"It is not for the Sun to overtake the Moon, nor does the night outstrip the day, but each in an orbit is swimming." [iii]

PHYSICAL LAWS OF NATURE

The universe of which we are a part of, consists of many wonders and even there are some things which could not be justified by science and sometimes, these things are referred as "Physical laws of nature" and these laws are set to be fixed and cannot be violated by humans. Now, the question is who is one who is behind such great creation who knows infinity and knows how to maintain life on the Earth. For instance, there is a fixed value of gravitational acceleration "g" on the surface of the Earth whose value is fixed which is "$g=9.8\ m/s^2$". On the hills and on the equator, it's value changes relatively but if the value of "g" varies only by 0.1% then the life on the Earth will not remain possible. Moreover, the speed of light is constant in the universe, and the gravity attracts everything downwards etc. Now, the question is still with us that who is behind such great management of the universe that everything is working in its finest form without any error.

FINEST CREATIONS

The creation of the whole universe is free from any kind of error, and everything is in its finest form with no more space of correction. Even the disbelievers feel themselves helpless when they are talking about the system of the universe. The whole universe, which is extending day by day according to the scientists, have everything in correct order. Now, the question is again who is the one who has made everything in such a beautiful form without any space of correction. Science is again silent on this question. Allah Almighty has said about the finest creation of the universe as:

"He who created seven heavens in layers. You will not see in the creation of the most Merciful any fault. So, look again – do you see any flaw? Then look again and again, your sight will return to you humbled and tired." [iv]

HUMAN BODY

The human body is also a wonder which helps us to understand and believe in the creator who made all humans perfect. A human body consists of 37 trillion of body cells. According to Scientists, if we open all the cells in the human body and place it on the Earth then it will cover the whole area of New York. The human body is very complex in working as there are millions of different cells each performing different operations at

the same time, but the system of their working is so organized that nothing mixed up. Each organ is performing its operation without being disturbed by other organs.

HEART ORGAN

Each human is gifted with an organ known as heart which main purpose is to pump blood in the body. According to science, an average heart of a human being pumps almost 8100 gallons in a single day. Moreover, the veins and arteries transport blood to different organs of the body. These arteries supply blood to every part of the body and if even a single artery is not working properly then the blood supply will not properly work. Now, the question is if human body is so complex then who is the manufacturer of this body. The answer to this question is the only creator Allah Almighty who is omnipotent and omnipresent. In Holy Quran Allah Almighty said,

"We will show them our signs on the horizon and within themselves until it becomes clear to them that it is the truth." [v]

THE POSITION OF EARTH IN THE UNIVERSE

If we see the position of Earth in the universe we came to know about that it has been placed at a perfect position which leads to the possibility of life on the Earth. The Earth lies at a zone in the universe which is classified as "Goldilocks Zone" which is neither too close to the Sun, nor too away from the Sun. The Earth is positioned at a position which have a perfect distance from the Sun. This perfect distance allows for the liquid water on the surface of the Earth which is an essential ingredient for the life on the Earth. If the Earth is positioned in such a way that it is far from the Sun like Jupiter etc, then the Earth will become deprived of the sunlight of the Sun and the temperature on the surface of the Earth would become too low that the life become impossible to exist. Similarly, if the Earth is positioned close to the Sun like Mercury, then the temperature would be too high that everything on the surface of Earth would be melt away. Now, the question is again that who is the one managing all these things? The science has again no answer about the external force which keeps all things in their position.

COMPLEXITY OF DNA

The DNA of a human being is the most complex part of the human body. The DNA of a human being is also classified as the "Blueprint" of the life of a human being. Every human being in this world has its own specific DNA. The Scientists believe that a human DNA in one cell has much more information than a complete library full of books. Its structures are very much complex to decode for a human being. So, the question is also being asked that if a DNA of a human being is so complex then the creator of human being is how much complex to understand.

EXPERIENCES IN LIFE

When we are born, we have been told that Allah Almighty is your only God and your creator. In this way, our relationship with the God is only because of our primarily belief given by our parents. The bond between us and the God is not as strong as a true Muslim. In my life, I feel like we become closer to Allah Almighty after knowing the hidden indications about the existence of the God. The universe itself is full of wonders, and each wonder is indicating towards the ultimate God Allah Almighty who is managing all these things in the universe without any help and without getting tired. It is rightly said in Holy Quran,

"Indeed, in the creation of the heavens and the earth and the alternation of the night and the day are signs for those of understanding" vi

Everything in this universe is giving information about the presence of Allah Almighty. In our lives, we experience a universal feature that we all know that Allah Almighty is watching us as it is in our believe but sometimes, it is experienced by us especially when we are sitting in solitude and isolation.

CONCLUSION

In the end, I want to end my arguments and reasoning on the existence of the creator by saying that all things in the universe are giving hints and indications about the presence of a Mighty God who is omnipotent and omnipresent, and who is managing each and everything in this universe. With the advancement of technology, Scientists started giving some exceptions on which science is maintaining silence, and they have no reasoning for them. These things are only in the hands of Allah Almighty. Nothing in this universe can work without the permission of Allah Almighty. Being a Muslim, we have a firm believe that this universe is being operated and managed by a single God. Everything is following the commandment of Allah Almighty and performing their duties in the perfect manner being assigned by Allah Almighty. Therefore, even after trillions of years of the universe's existence, everything continues to function properly, in the same manner as it was assigned at the beginning.
